

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for requesting a service provider to provide services so that the service provider can demonstrate to a service intermediary that it provided services requested by a service consumer, the method comprising:

- generating by the service consumer a start code and a sequence of codes starting with the start code and ending with an end code, each code being generated by applying a function to the previously generated code, the codes being generated in a forward order from the start code to the end code;
- registering with the service intermediary an indication of an end code of the service consumer and an identification of the service provider wherein the intermediary provides the end code to the service provider;
- when the service consumer requests the service provider to provide services, providing by the service consumer to the service provider the generated codes in reverse order of generation such that the service consumer only provides the next code in reverse order when a prior requested service has been provided by the service provider;
- when the service provider can verify that the end code can be derived from the code provided with a request, providing the requested service to the service consumer;
- providing by the service consumer to the service intermediary an indication of a consumer last code provided by the service consumer to the service provider;
- providing by the service provider to the service intermediary an indication of a provider last code provided by the service consumer to the service intermediary;

- when the service intermediary determines that the consumer last code and the provider last code are the same, indicating that evidence has been provided that the requested service was provided; and
- when the service intermediary determines that the consumer last code and the provider last code are not the same,
- applying the function to the provider last code to determine whether the end code can be generated;
- when the end code can be generated, indicating that the service provider has provided evidence that the requested service was provided and thus establishing that the consumer last code was not the actual last code provided to the service provider or establishing that the provider last code was not the actual last code provided to the service provider by the service consumer; and
- when the end code cannot be generated, indicating that the service provider has not provided evidence that the requested service was provided and thus establishing that the provider last code was not a code provided in a request to the service provider by the service consumer such that the service provider verified that the end code can be derived from the provider last code.

2. (Original) The method of claim 1 wherein the indication of the end code is a start code from which the end code can be derived by the service intermediary.

3. (Original) The method of claim 1 wherein the registering include providing a start code and an end code.

4-7. (Cancelled)

8. (Original) The method of claim 1 wherein the service consumer requests the service provider to provide a service after the last requested service has been provided by the service provider.

9. (Original) The method of claim 1 wherein the service consumer can limit the number of outstanding requests for services to control exposure to liability for requested services that have not yet been provided.

10. (Canceled)

11. (Canceled)

12. (Original) The method of claim 1 wherein the service provider verifies that the end code can be derived from a provided code by comparing a previously provided code to the result of applying a function to the provided code.

13. (Canceled)

14. (Original) The method of claim 1 wherein the sequence of codes has a length.

15. (Original) The method of claim 14 wherein the length is agreed upon by the service provider and the service consumer.

16. (Original) The method of claim 14 wherein the setting of the length of the sequence of codes can be used by the service provider to control exposure for liability for provided services for which payment has not yet been received.

17. (Original) The method of claim 14 wherein the service intermediary provides the length to the service provider.

18. (Original) The method of claim 1 wherein the service provider registers with the service intermediary an indication of an end code of the service provider and provides the service consumer with a code from which the end code of the service provider can be derived when a service is provided.

19. (Original) The method of claim 18 wherein a code provided by the service provider to the service consumer can be used in determining whether the service consumer requested services.

20-28. (Canceled)

29. (Previously Presented) A method for providing services requested by a service consumer so that a service provider can demonstrate it provided the requested services, the method comprising:

receiving from a service intermediary an indication that the service consumer has registered to request services of the service consumer and an end code, the registration by the service consumer identifying the service provider and an end code of a sequence of codes, the sequence of codes generated by the service consumer by applying a one-way function starting at a start code generated by the service consumer and ending at the end code;

receiving requests for services from the service consumer, the requests including a code;

when it can be determined that the end code can be derived from the code included from the request, providing the requested service; and

providing to the service intermediary a code included in a request to demonstrate that the service provider provided requested services to the service

consumer wherein the service intermediary initially compares the code provided by the service provider to a code provided by the service consumer and when the codes match, the service intermediary determines that the service provider did provide the services and when the codes do not match, the service intermediary applies the one-way function to the code provided by the service provider to determine whether the service provider did provide the services.

30. (Canceled)

31. (Canceled)

32. (Original) The method of claim 30 wherein a code generated by applying the function is compared to a code previously sent by the service consumer.

33. (Original) The method of claim 32 wherein the code previously sent is the last code received from the service consumer.

34. (Previously Presented) A computer system of a service consumer for requesting a service provider to provide services, comprising:

- a component that generates a start code and then generates a sequence of codes that includes the start code and an end code using a one-way function;

- a component that registers with a service intermediary that the service consumer will request the service provider to provide services, the registering including providing to the service intermediary the end code of the sequence and an identification of the service provider; and

- a component that sends to the service provider requests for services and a code of the sequence of codes in reverse order of generation so that the service provider can use the codes to demonstrate that the service consumer

requested services wherein the service intermediary initially compares a code provided by the service provider to a code provided by the service consumer and when the codes match, the service intermediary determines that the service consumer did request the services and when the codes do not match, the service intermediary applies the one-way function to the code provided by the service provider to determine whether the service consumer did request the services.

35. (Original) The computer system of claim 34 wherein the codes are sent starting with the penultimate code of the sequence.

36. (Original) The computer system of claim 34 wherein the service provider receives the end code from the service intermediary and when the service provider receives a request from a service consumer, it verifies whether the end code can be derived from the code of the request.

37. (Original) The computer system of claim 36 wherein the service provider provides the requested service only after it can be verified that the end code can be derived from the code of the request.

38. (Original) The computer system of claim 36 wherein the service provider provides to the service intermediary a code provided in a service request to demonstrate that the service consumer requested a service.

39. (Previously Presented) The computer system of claim 34 wherein the service intermediary stores the end code and provides an end code to service provider.

40. (Original) The computer system of claim 34 wherein when the service intermediary receives an indication that the service consumer disputes that the service

provider provided the service that the service provider alleges it provided, the service intermediary resolves the dispute.

41-43. (Cancelled)
